

FEASIBILITY STUDIES

Design. Build. Succeed.

Get Rolling on Your Project.

Profitability is the major factor in determining whether to execute a project. Finding the most cost-effective way to build your project requires forward-thinking and careful planning. With concept development from H+M Industrial EPC's professional engineers, your project is completely thought through, from inception through start-up.

+Our Feasibility Studies Include

- Preliminary Scoping & Pre-Project Planning
- Block Flow Diagram
- Preliminary Equipment Selection
- Preliminary Layout
- Order of Magnitude Cost Estimate
- ROI Analysis

By combining the latest technology with our decades of experience, we help determine the return on investment for the concept, and think through all potential technical and scheduling challenges. Most importantly, our feasibility studies establish the safest, most efficient plan to design and construct your project.

“H+M has provided engineering packages for all disciplines at a very competitive rate. Their engineers and designers are not only skilled technically, but their communication through site and field visits helps ensure expectations are met and the best solution is delivered. Implementation per H+M’s designs has proven their competence and thoroughness with good constructability reviews, minimal rework and continued prompt support during construction.”
